The sub soil texture is sandy loam to clayey loam having the clay percentage is increasing with the depth and alleviation processes continue. The ph. of the soil varies from 5.65 to 5.8 and the soil comes under medium said class. The Chemical Analysis Report shows than (Nitrogen), P2O5 (Phosphorous pants Oxide) are low K2O (Potassium Oxide) is medium in cultivated land. The top soil are more cred0ible in subsequent rainy a season because of low porosity and reduced moisture capacity.

A large number of species of weeds are also common in the Garden such as *Mikania micrantha*, *Chromolena odorata* and *Cyprus sps.* etc. The practice of shifting cultivation is also popular by the local people in place of permanent cultivation. Therefore, top reduction of forests, soil orison and other harmful results. Only some crops are cultivated such as paddy, matzo, cucumber, patato and yams etc. by local people. Proper beds were prepared for cultivation of medicinal herbs, shrub and climbers and tree species of medicinal plants planted in hill slop as per their suitable habitat.

6. NMPB Project :

A project entitled ‘Nursery development at Regional Ayurveda Research Institute, Mithun Gate, New Itanagar, Arunachal Pradesh’ was sanctioned by NMPB, Ministry of AYUSH, GOI. This project has been initiated to raise medicinal plants for the distribution to farmers and forest department of the Arunachal Pradesh. The project work includes collection of seedling material, preparation of saplings, maintenance of saplings and sale to the farmers for mass cultivation. This project work was completed on 04th November 2020.
